☎ +91-75750 81705 ✉ krunalgoswami13579@gmail.com [in linkedin/krunal-goswami](https://www.linkedin.com/in/krunal-goswami) 📍 Mumbai, India

Technical Skills

Languages: C#, TypeScript, JavaScript (ES6+), Python, SQL

Frontend: Angular (latest), NgRx, HTML5, CSS3, SCSS, Responsive UI Design, Accessibility, MVC Pattern

Backend: ASP.NET Core (MVC), Entity Framework Core, LINQ, Dependency Injection, RESTful API Design, FastAPI, SignalR

Cloud & Azure: Azure Functions (Serverless), Azure Blob/Queue Storage, Azure App Services, Azure SQL Database, Azure VMs, Azure Virtual Network, Azure API Management, Azure DevOps (CI/CD), Azure Monitor & Application Insights

Security: OAuth2 / OpenID Connect, AES-GCM Encryption, Opaque Token Architecture, Secure API Development

Databases & Messaging: PostgreSQL, MySQL, SQL Server, Redis, Kafka, RabbitMQ, Elasticsearch

Testing & Quality: Unit Testing, Integration Testing, JMeter (Load Testing), Code Reviews, Continuous Improvement

Tools & Practices: Docker, Git, Liquibase, Debezium CDC, Serilog, ELK Stack, Agile Methodologies, Data Analysis

Experience

Senior Software Engineer | Enablistar Pvt Ltd

July 2025 – Present

Mumbai, India

- Reduced login **REST API** latency by **60%** via Redis-based session validation and designed a secure opaque access-token system with AES-GCM encryption, aligned with **OAuth2 / OpenID Connect** standards — demonstrating strong **decision making** in security architecture.
- Architected a reusable **Audit Trail Framework** using EF Core Interceptors and the Outbox Pattern, leveraging Kafka for reliable, decoupled event delivery; applied **data analysis** of audit logs to drive **continuous improvement** in system observability.
- Engineered a **Multi-Database Provider abstraction** in EF Core supporting 5 providers (Oracle, PostgreSQL, SQL Server, MySQL, SQLite) — an **innovative programming** solution ensuring platform flexibility and long-term maintainability.
- Modernised a high-traffic audio CAPTCHA service using **FastAPI** and in-memory processing, achieving a **98% improvement** in response times; gathered and incorporated **user requirements** to stabilise performance under peak concurrent load.
- Standardised centralised logging via **Serilog and ELK Stack**, streamlining production incident investigation and improving **data** visibility across distributed services through **self-directed** analysis and tooling improvements.
- Optimised high-traffic **ASP.NET Core** endpoints using EF Core No-Tracking strategies and LINQ query tuning; leveraged **data-driven** profiling to stabilise throughput and identify **continuous improvement** opportunities under peak load.

Software Engineer | Zeus Learning

June 2022 – July 2025

Mumbai, India

- Built a real-time notification engine using **Debezium CDC and SignalR**, managing large-scale asset distribution via **Azure Blob Storage**; analysed **data** delivery patterns to drive **innovation** in event-driven pipeline design.
- Developed and maintained complex **Angular MVC** features — including **NgRx** state management, reusable components, and responsive UI — ensuring seamless integration with ASP.NET Core **REST API** backends; applied **testing** practices to guarantee component reliability.
- Orchestrated serverless workflows using **Azure Functions** to decouple core services and increase system resilience; collaborated cross-functionally to align architectural **decisions** with evolving **user requirements** and business **growth** targets.
- Managed and scaled hybrid infrastructure across **Azure VMs** and cloud-native message queues (**RabbitMQ**), accelerating course-processing pipelines by **40%** through optimised queue strategies; shared knowledge **collaboratively** with the team to scale **growth** across services.
- Executed a seamless migration to **MySQL**, achieving a **20% improvement** in query execution times through schema optimisation, index restructuring, and **analysis-driven** query refactoring.
- Actively participated in **Agile Methodologies** — sprint planning, work breakdowns, estimation, and retrospectives — while contributing to peer code reviews and **testing** standards, fostering a **collaborative** culture of **continuous improvement**.

Software Engineer Intern | Zeus Learning

Jan 2022 – May 2022

Mumbai, India

- Integrated 10+ **RESTful API** endpoints using Node.js within **Agile** sprints; applied **self-directed** learning to rapidly contribute to production releases, gaining exposure to CI/CD pipelines and **collaborative** team workflows.

Education

Bachelor of Engineering in Computer Science | Maharaj Sayajirao University

July 2018 – May 2022

Vadodara, India
